Networks and organizations

研究の概要

How do networks shape our lives and our successes? In recent years, interest in both personal and organizational networks has increased. We have discovered that the way we build networks around us greatly influences our performance. My research focuses mainly on networks among organizations and investigates how innovation is shaped by networks. I also work on creating new concepts related to networks such as networks within organizational nodes, network filters, and the network-shaping effects of field forces.

研究の詳細

□研究・技術のプロセス ■研究事例 □研究成果 □使用用途・応用例 □今後の展開

My research focuses on large-scale organizational fields and networks and asks the question of how network structure influences innovation, flows and future changes in the network. I have looked at the Japanese nanotechnology, biotechnology and automotive industries through joint-patent networks and analyzed trends in university-industry collaborative innovation. With a co-author, I am also working on questions of family business and inter-generational networks through individual case studies and a survey of family firms in Nagano. I also conduct historical research and look at the network of traditional gentlemen's clubs in London.

産学官連携先に向けた
アピールポイント

・ ネットワーク分析や上記の組織間ネットワークなどについての研修・講演ができます。英語・日本語で対応できます。
